

REMARKS

In this Response, Claims 1 and 8 are amended. Claim 2 was previously cancelled. Claims 1 and 3-12 are pending in the application.

Rejections of the Claims under 35 U.S.C. § 102

Claims 1 and 3-12 stand rejected under 35 U.S.C. 102(b) as being anticipated by U.S. Patent 7,006,514 issued to Oki, et al. (“Oki”).

Applicants amend independent Claims 1 and 8 to recite that “each VOQ sends the request signal for outputting a cell to each of the plurality of sub-scheduling means in every time slot when the VOQ has the cell.”

Oki does not disclose these recited features. Oki discloses a Pipelined-based Maximal-sized Matching (PMM) scheduling method that uses a main scheduler to schedule outputs from the VOQs. As shown in Figure 4B of Oki, the main scheduler in every time slot goes through each VOQ to dispatch a cell in the VOQ for output to a sub-scheduler. The main scheduler informs the sub-scheduler of the cell and decrements a request counter associated with the VOQ. However, when there are a large number of VOQs in the system, the operation of the main scheduler becomes a performance bottleneck. As a result, the operations of the main scheduler cause delay in the pipeline operations. This problem has been described in the specification on pages 5-7 and Figure 4 of the current application. The VOQ of Oki does not send a request signal for outputting a cell to each of a plurality of sub-schedulers in every time slot. Rather, Oki uses a main scheduler to determine cell scheduling in every time slot. Thus, Oki does not teach each of the elements of amended Claims 1 and 8, as well as their respective dependent claims, namely, Claims 2, 3-7 and 9-12.

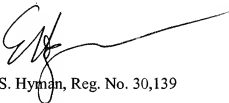

Accordingly, withdrawal of the rejection of Claims 1 and 3-12 is requested.

CONCLUSION

In view of the foregoing, it is believed that all claims are now in condition for allowance and such action is earnestly solicited at the earliest possible date.
